

IMO D2 SAMPLING

Our goal is to provide customers with all the necessary support for IMO D-2 & US EPA VGP 2013 Guidelines compliance for Ballast Water Treatment System installed onboard.

WHAT IS D2 SAMPLING?

IMO D2 commissioning testing is carried out to confirm that the installation of the BWTS was successfully performed. It validates that the mechanical, physical, chemical and biological processes of the BWTS are working correctly according to the design specifications.

WHY D2 SAMPLING IS IMPORTANT?

- D2 commissioning sampling is essential for BWMS as it ensures compliance with international standards, validates treatment efficacy, and verifies system performance.
- IMO establishes strict rules for treating ballast discharge to prevent the spread of harmful organisms from shipping activities.

IMO D2 SAMPLING

Vedam for Your IMO D2 Commissioning Sampling

An accredited technician will take the necessary samples and analyse them for organisms, according to the IMO BWM.2/Circ.70/Rev.1 and D2 standards.

Why Vedam?

- 24/7 availability
- Excellent customer service
- An adept and technically proficient team of partners, across diverse geographic regions
- Swift mobilization capabilities
- Our commitment to providing cost-effective services

Note: IMO D2 sampling must be carried out by a certified third party. This may no longer be carried out by the manufacturer.
